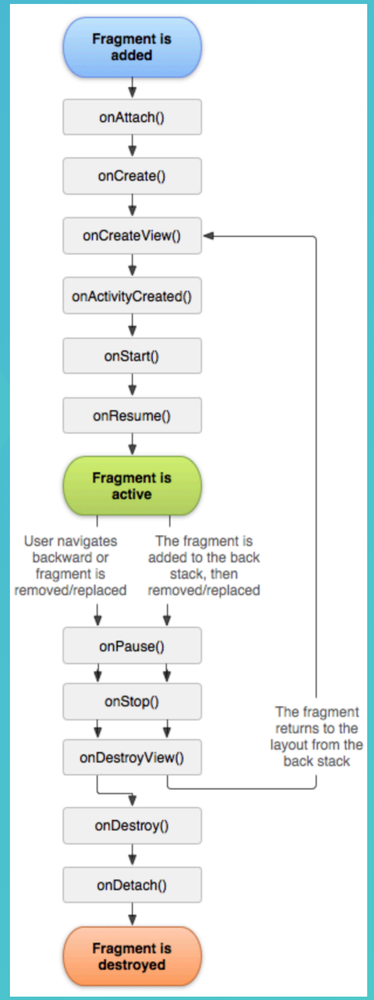
# Creating a Fragment

- New callbacks
  - onAttach
  - onCreateView
  - onActivityCreated
  - onDestroyView
  - onDetach



https://developer.android.com/reference/android/support/v4/app/Fragment

twitch.tv/dancojocar

youtube.com/dancojocar

# Creating a Fragment

```
class ArticleListFragment : Fragment() {

    override fun onCreateView(
            inflater: LayoutInflater,
            container: ViewGroup?,
            savedInstanceState: Bundle?
    ): View {
        // Inflate the layout for this fragment
        return inflater.inflate(R.layout.example_fragment, container, false)
    }
}
```

**Declare the fragment inside the activity's layout file.**

```
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout xmlns:android="http://schemas.android.com/apk/res/android"
    android:orientation="horizontal"
    android:layout_width="match_parent"
    android:layout_height="match_parent">
    <fragment android:name="com.example.news.ArticleListFragment"
            android:id="@+id/list"
            android:layout_weight="1"
            android:layout_width="0dp"
            android:layout_height="match_parent" />
    <fragment android:name="com.example.news.ArticleReaderFragment"
            android:id="@+id/viewer"
            android:layout_weight="2"
            android:layout_width="0dp"
            android:layout_height="match_parent" />
</LinearLayout>
```

https://developer.android.com/reference/android/support/v4/app/Fragment

twitch.tv/dancojocar

youtube.com/dancojocar

# Creating a Fragment

```
class ArticleListFragment : Fragment() {

    override fun onCreateView(
            inflater: LayoutInflater,
            container: ViewGroup?,
            savedInstanceState: Bundle?
    ): View {
        // Inflate the layout for this fragment
        return inflater.inflate(R.layout.example_fragment, container, false)
    }
}
```

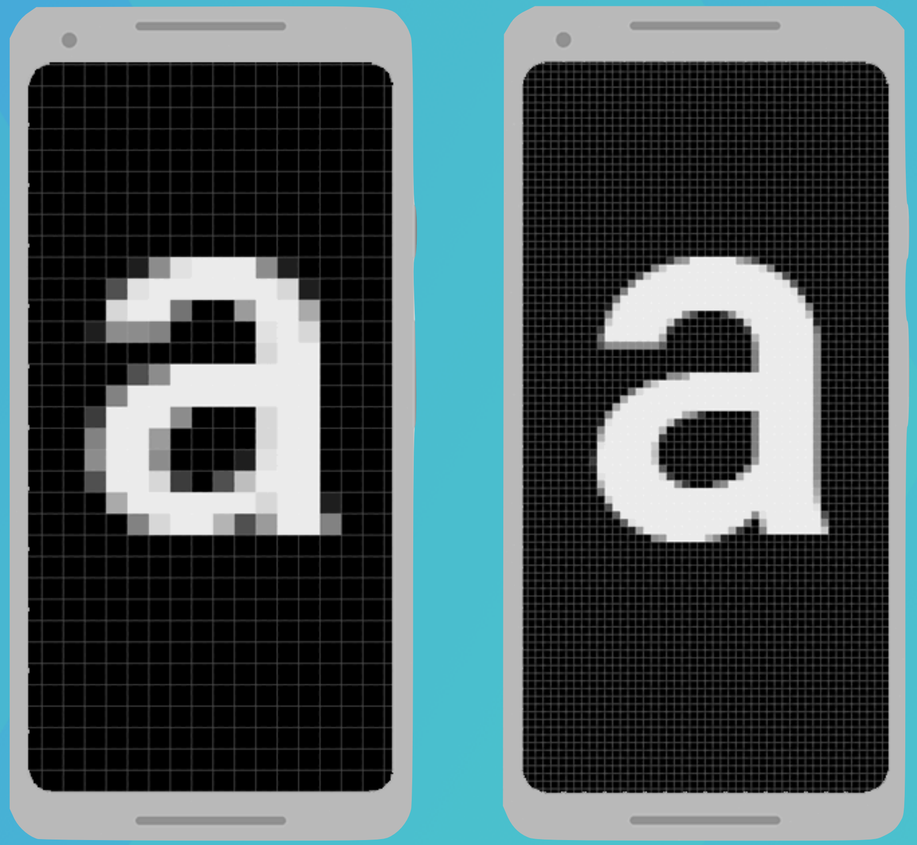
**Or, programmatically add the fragment to an existing ViewGroup**

```
val fragmentManager = supportFragmentManager
val fragmentTransaction = fragmentManager.beginTransaction()

val fragment = ArticleListFragment()
fragmentTransaction.add(R.id.fragment_container, fragment)
fragmentTransaction.commit()
```

**https://developer.android.com/reference/android/support/v4/app/Fragment**

# Density-independent pixels



# Density-independent pixels

```
<Button android:layout_width="wrap_content"
    android:layout_height="wrap_content"
    android:text="@string/clickme"
    android:layout_marginTop="20dp" />
```

```
<TextView android:layout_width="match_parent"
    android:layout_height="wrap_content"
    android:textSize="20sp" />

# Jetpack Compose

https://developer.android.com/jetpack/compose

twitch.tv/dancojocar

youtube.com/dancojocar

# Compose Layout Basics

Compose transforms state into UI elements, via:

- Composition of elements
- Layout of elements
- Drawing of elements

# Goals

- High performance
- Ability to easily write custom layouts

# Basics

```
@Composable
fun ArtistCard() {
    Text("Alfred Sisley")
    Text("3 minutes ago")
}
```

Alfred Sisley
3 minutes ago

twitch.tv/dancojocar

youtube.com/dancojocar

# Basics

```
@Composable
fun ArtistCard() {
    Column {
        Text("Alfred Sisley")
        Text("3 minutes ago")
    }
}
```

Alfred Sisley

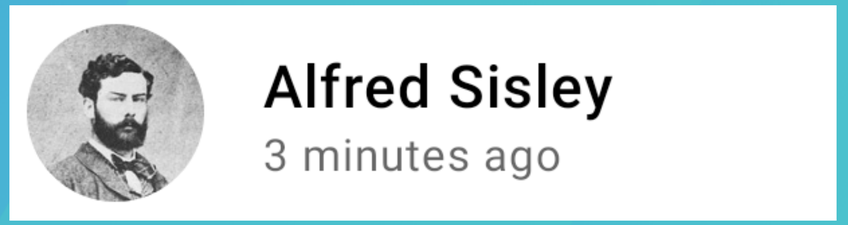
3 minutes ago

twitch.tv/dancojocar

youtube.com/dancojocar

# Basics

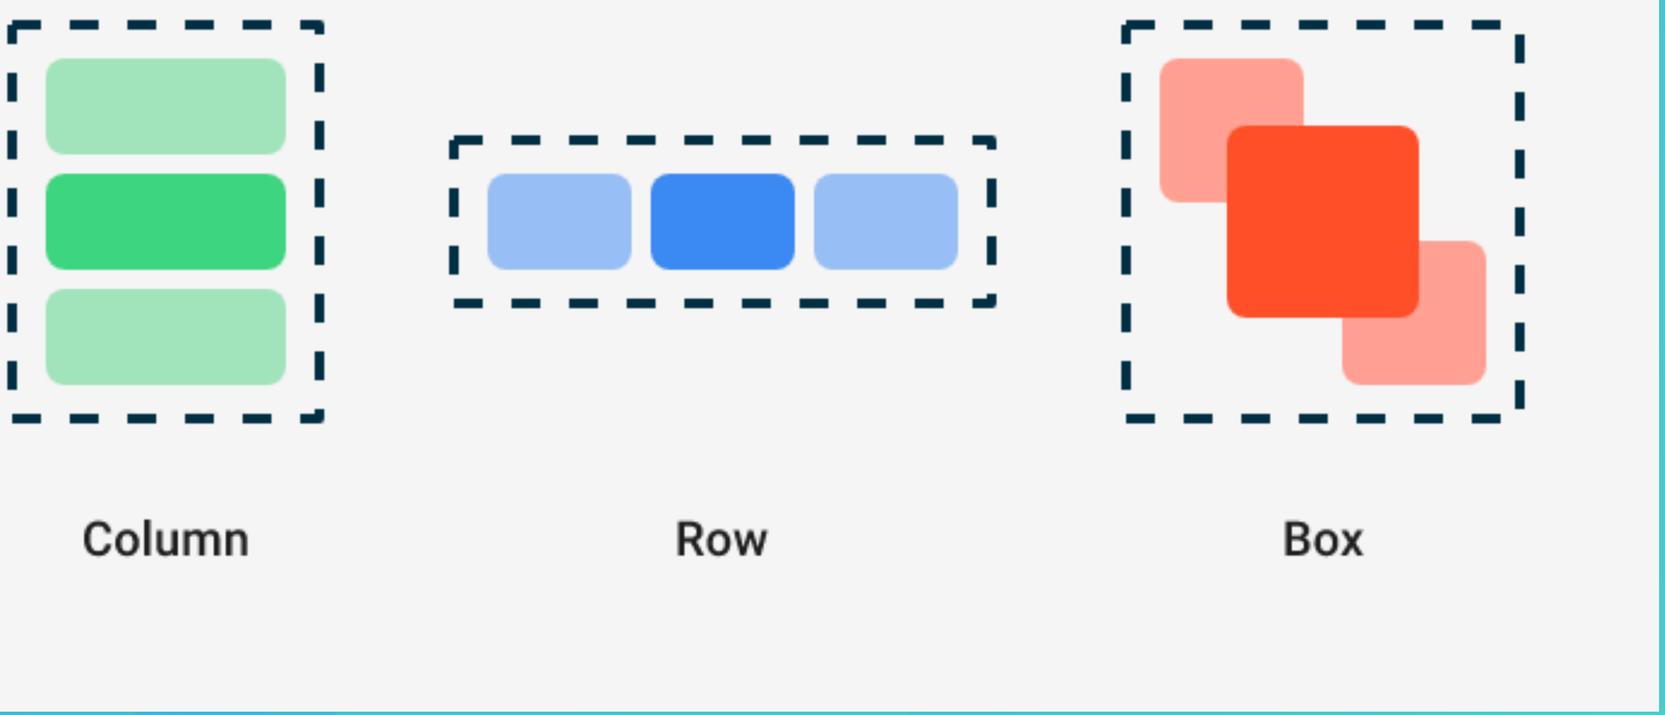
```
@Composable
fun ArtistCard(artist: Artist) {
    Row(verticalAlignment = Alignment.CenterVertically) {
        Image(/*...*/)
        Column {
            Text(artist.name)
            Text(artist.lastSeenOnline)
        }
    }
}
```



twitch.tv/dancojocar

youtube.com/dancojocar

# Basics



twitch.tv/dancojocar

youtube.com/dancojocar

# LazyLists

```
import androidx.compose.foundation.lazy.items

@Composable
fun MessageList(messages: List<Message>) {
    LazyColumn {
        items(messages) { message ->
            MessageRow(message)
        }
    }
}
```

twitch.tv/dancojocar

youtube.com/dancojocar

# Constraint Layout

DEMO

```
@Composable
fun ConstraintLayoutContent() {
    ConstraintLayout {
        // Create references for the composables to constrain
        val (button, text) = createRefs()
        Button(
            onClick = { /* Do something */ },
            // Assign reference "button" to the Button composable
            // and constrain it to the top of the ConstraintLayout
            modifier = Modifier.constrainAs(button) {
                top.linkTo(parent.top, margin = 16.dp)
            }
        ) {
            Text("Button")
        }
        // Assign reference "text" to the Text composable
        // and constrain it to the bottom of the Button composable
        Text("Text", Modifier.constrainAs(text) {
```
